Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1, 2, 4-8 and 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Enomoto et al. (U.S. Pat. 5,830,121) in view of Noguchi et al. (U.S. Pat. 6,307,332) for the reasons set forth in numbered paragraph 5 of the previous Office Action, paper number 20081119.

Regarding the newly added limitation directed to the estimating unit determining secular change by calculating a first secular change amount based on only the use time and a second secular change amount based on only the number of use times, the Examiner pointed out in the previous Office Action that the secular change based on use time (col.5, lines 20-37) and the secular change based on the number of use times (col.9, lines 15-40) are done separately, even if done at the same time (col.12, lines 4-8).

Response to Arguments

3. Applicant's arguments filed February 25, 2009 have been fully considered but they are not persuasive.

Applicant argues that in Enomoto, "when both the total usage operating time and the number of connections are less than a predetermined threshold value, if both the secular change based on only the total usage operating time and the secular change based on only the number of connections are totally taken into consideration, an alarm buzzer cannot be actuated

even when an alarm should be generated". However, Applicant does not provide support for this accusation and the Examiner can find nothing in Enomoto that would suggest that the disclosed device does not work properly.
